Professional Summary

Full Stack Developer with nearly 3 years of professional experience designing, developing, and deploying scalable, high-performance web applications with React.js, Node.js, and PHP. Skilled in architecting features end to end — analysing requirements and behaviour before building — and in translating business needs into reliable business logic. Experienced with message brokers and queue-based processing for asynchronous, high-throughput systems, alongside RESTful API development, database design and optimization, secure authentication (JWT, RBAC), and CI/CD automation. Focused on clean, maintainable code that delivers measurable business value.

Core Competencies

Frontend Development	React.js, Redux, HTML5, CSS3, JavaScript, TypeScript, Bootstrap, TailwindCSS, Responsive Design, UI/UX Implementation, Asynchronous Programming, State Management
Backend Development	Node.js, Express.js, PHP (CodeIgniter, CI4), RESTful APIs, Message Brokers & Queues, Database Design, Database Optimization, Microservices Architecture, Socket.io, JWT Authentication, Role-Based Access Control (RBAC)
Databases & Cloud	MySQL, MongoDB, Firebase, Database Schema Design, Docker, CI/CD Pipelines, Continuous Integration, Continuous Deployment, Git, GitHub
Additional Skills	Full Stack Architecture, High-Performance Application Design, Payment Gateway Integration, Secure Authentication Systems, Multi-role Access Control, Performance Optimization, Third-party API Integration

Professional Experience

Anaxee Digital Runners Private Limited March 2026 – Present
Full Stack Developer *Indore, MP*

Elites Capital June 2025 – March 2026
Full Stack Developer *Indore, MP*

Atzean Technologies LLP June 2023 – June 2025
Full Stack Developer *Indore, MP*

Key Projects

- Architect and develop features end to end — analysing each requirement and how the feature should behave before implementing it against real business needs.
- Design business logic driven by business requirements, translating operational needs into reliable, maintainable backend workflows.
- Integrate message brokers and queue-based processing to decouple services and handle asynchronous, high-volume workloads.
- Build high-performance, scalable applications through optimized architecture, efficient data flow, and continuous performance tuning.
- Delivered two enterprise platforms — an investment platform and a CRM — with role-based access control (RBAC), JWT authentication, and payment workflows using React.js, Node.js, Redux, PHP (CodeIgniter 4), and MySQL.
- Designed and optimized relational database schemas for complex financial transactions and built responsive multi-role dashboards with role-specific functionality.
- Developed a full-stack e-commerce platform and a real-time order-management system using React.js, TypeScript, Tailwind CSS, Node.js, Firebase, and MySQL.
- Integrated PhonePe payments (PCI-compliant) and the Shiprocket shipping API, and optimized queries for a 35% improvement in page load times.

Featured Projects

Elites Capital – Investment Platform | React.js, Node.js, Redux, MySQL 2025
CRM Platform | React.js, PHP (CodeIgniter 4), MySQL 2025
Anahee – E-Commerce Clothing Application | React.js, TypeScript, Tailwind CSS, Node.js, MySQL 2023 – 2025
Coffee Station Web App – Real-Time Order Management | React.js, Firebase, Node.js, Express.js 2023 – 2025

Education

Swami Vivekanand College of Engineering Indore, India
B.Tech in Computer Science

Key Achievements

- Architected and developed a comprehensive full-stack investment platform with RBAC and payment workflows, plus secure JWT authentication for admin, investor, and user dashboards.
- Built a responsive multi-role dashboard system and designed an optimized database schema for handling complex financial transactions and user data.
- Designed an enterprise-grade CRM with a sophisticated role-based dashboard and backend modules for contact management, sales-pipeline tracking, and reporting.
- Implemented JWT authentication and RBAC for administrators, managers, and sales teams, achieving a 40% reduction in operational complexity through centralized admin design and workflow automation.
- Built a full-stack clothing e-commerce platform with a PCI-compliant PhonePe payment integration and a Shiprocket shipping API for automated order fulfillment, tracking, and notifications.
- Developed an admin dashboard for product, inventory, and order management, designed a type-safe TypeScript UI, and optimized queries for a 35% improvement in page load times.
- Built a real-time order-management system serving admin, staff, and customer roles with live order tracking, powered by Firebase Realtime Database for instant synchronization across clients.
- Engineered an efficient frontend-backend data flow that minimized latency and sustained performance under concurrent orders and real-time notifications.
- Designed and delivered 5+ full-stack web applications supporting thousands of concurrent users.
- Reduced CRM platform operational complexity by 40% through centralized admin architecture and workflow optimization.
- Implemented secure authentication and multi-role access control systems for enterprise platforms managing sensitive user data.
- Successfully integrated 15+ third-party APIs including payment gateways, shipping systems, and real-time services.
- Optimized database performance across multiple projects achieving 35% improvement in query execution times.
- Mentored 3+ junior developers, improving team productivity and establishing code quality standards and best practices.
- Established CI/CD pipelines enabling automated continuous deployment workflows, reducing deployment time by 50%.
